Pil-low collection

by **NEISAKO**

Pil-low is a multifunctional sofa characterized by specific relationship between the seat, backseat and cushion in which the cushion has a double function – in the sofa position it improves the seating ergonomics and in the bed position it serves to enlarge the sleeping space. The usual decorative cushions used for improving seating ergonomics are no longer required. The innovative mechanism enables simple transformation from sofa to bed. In the first stage

of opening the storage space becomes available, otherwise completely hidden in the sofa position. The form of the sofa has been designed as a complete spatial object and functions equally well freestanding or standing next to the wall.
