PRODUCT SHEET

Toggle collection

by NUMEN / FOR USE

Toggle is an unpretentious armchair of small dimensions whose character entirely rests on the star-shaped composition of its profile. The three basic radial triangles of its structure extend into its front legs and the armrest, providing an aesthetic and static balance to the chair. The removable cushions attach to the wooden base with strip-shaped gussets connected by a cylindrical plug, the Toggle.

Depending on the treatment of the wood and the selection between the wooden or steel front legs, the armchair changes its appearance, adapting to its surroundings and purpose.
