These data suggest that the observed effects of the intervention on the use of the 100-hour rule may be due to the intervention itself, rather than to the effects of the intervention on the use of the 100-hour rule. The results of the study suggest that the intervention may have had a positive effect on the use of the 100-hour rule, but the results of the study also suggest that the intervention may have had a negative effect on the use of the 100-hour rule. The results of the study suggest that the intervention may have had a positive effect on the use of the 100-hour rule, but the results of the study also suggest that the intervention may have had a negative effect on the use of the 100-hour rule.
